

Internal Modifications

Looking forward showing cut-away bulkhead and battery compartment

Extended base for bunks in place. Note chain locker and extra bracing across bulkhead

Internal Modifications

Looking aft starboard side showing bowl unit. Bowl can be lifted out for emptying. Original lockers remain as open-fronted caves

Looking aft port side showing chart area and electrics. Wiring in progress. Floors of new lockers can be removed for access to bilge keels etc.

Internal Modifications

Looking aft showing step concealing Porta Potti. Stove will fit on step or chart area. Front was made from existing removable locker fronts and slides up to access under step

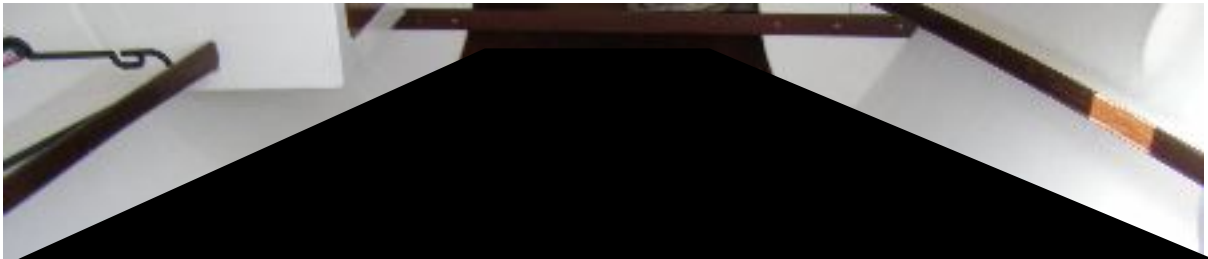

Step folded up, front removed allowing Potti to slide out - a 10L water container will fit where boots are. Cabin sole has been extended aft under bridge deck and cockpit as far back as possible keeping floor level. Battens on floor prevent Potti from moving sideways. Potti only needs to be slid out far enough for lid to open back against step

Internal Modifications

Original berth cushions in place temporarily. Plan is to replace with shorter versions each side and single cushion across forward area, see below:

Internal Modifications

Mast support strut in place and table fitted.

Internal Modifications

Patent ready-use holder for essentials when sailing slides into drop board grooves
